

**In the polar diagram has to be:**

- 1) Sum of the angles  $\gamma$  equal to  $360^\circ$  and this must match to the axis labels
- 2) Range of the luminous intensity must be marked
- 3) Axis has to be marked
- 4) The  $\gamma = 0^\circ$  has to be adequate to the real orientation of the luminaire at the measurement, must be plotted on the graph vertically downwards
- 5) Must be placed the legend of the individual photometric planes

**Legenda:**

—◆—	C0 - Longitudinal pl.
—+—	C90 - Transverse pl.
